OPEN-SOURCE MEDIA BRIEF

Iran, Iranian, Tehran

As of 14 Nov 2026, 06:25 UTC. Last 24 hours against the 24 hours before, in a 7-day window: 876 articles from 84 outlets. Describes media coverage, not events on the ground.

BOTTOM LINE

Coverage was steady against the day before and is below its usual level.

The balance between escalation and diplomacy language is unchanged.

Countries frame the topic differently; the clearest gap is "Trump".

No new story reached two outlets in the last 24 hours.

KEY JUDGMENTS

1 Coverage was steady against the day before and is below its usual level.

MEDIUM CONFIDENCE

32 articles in the last 24 hours vs 43 in the 24 hours before (-26%), from 15 outlets. The usual level is 46 a day (average of 4 complete days), so the last 24 hours are -30% against it.

Caveat: With counts this small the sample cannot confirm or rule out a move of this size, so confidence is reduced.

2 The balance between escalation and diplomacy language is unchanged.

HIGH CONFIDENCE

Escalation words in 44% of articles (earlier 44%), diplomacy words in 9% (earlier 12%). Net move: +2 points, inside the noise margin of 28 points for 32 and 43 articles. Home press, measured separately: escalation words in 24% (earlier 26%), diplomacy words in 9% (earlier 8%).

3 Countries frame the topic differently; the clearest gap is "Trump".

MEDIUM CONFIDENCE

Israel outlets give the topic 16.1% of their articles; US outlets give the topic 8.7% of their articles. Home press is left out of the attention comparison, since it covers the topic as domestic news. "Trump" appears in 26% of Israel topic articles and 3% of Iran.

Caveat: Iran is home press: its topic articles include domestic news, which lowers the share of every foreign name. Read the gap as indicative.

Trend judgments are measured on the 16 fixed RSS feeds outside Iran. Confidence starts from the evidence base (High: 60+ articles from 5+ outlets; Medium: 20+ from 3+; otherwise Low). It drops one level when a finding does not hold without the busiest outlet, or when a move was measured that the sample is too small to confirm. A change is only called when it is larger than its sampling noise.

WHAT CHANGED IN THE LAST 24 HOURS

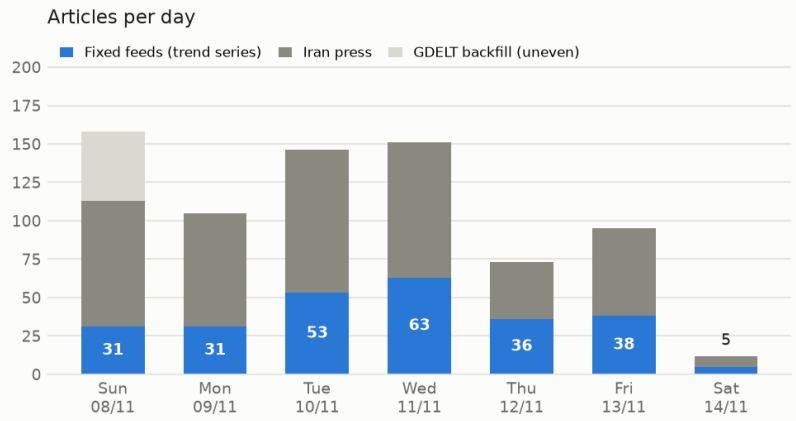

- No new story reached two or more outlets.

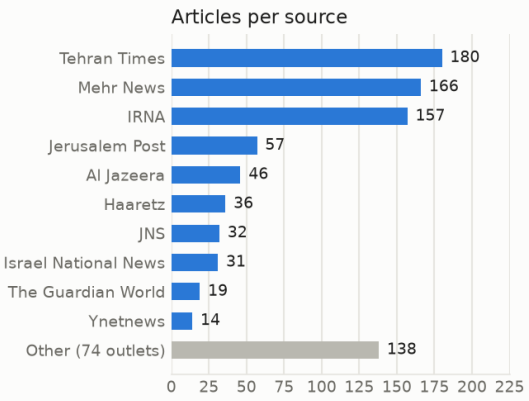

• Mentioned more: North American (0% to 12%), Shabbat (0% to 12%), Sheva-Israel National (0% to 12%).

COVERAGE

News coverage: Iran, Iranian, Tehran

876 articles, 08/11 to 14/11.

SOURCE CAVEATS

- 18 of 19 feeds answered at the last collection (2026-11-14 06:20 UTC). Failed: UN News.
- Every item was new in: Al Jazeera. These feeds turned over completely between runs, so some of their articles were probably missed and their counts are a floor.
- Iran press (IRNA, Mehr News, Tehran Times) is state or state-affiliated and supplied 50% of matching articles. It shows the official line, not public opinion. It is kept out of the trend judgments and reported separately.
- GDELT backfill added articles on 1 of 7 days. It is uneven from day to day and carries headlines only, so it is used for stories and names and never for trends.
- The last GDELT run did not complete for: 2026-11-09, 2026-11-10, 2026-11-11, 2026-11-12, 2026-11-13, 2026-11-14.
- 42 reprints of the same headline under other domains were removed before counting.
- English-language outlets only. Hebrew, Persian and Arabic coverage is not seen.
- Tone is measured with two short word lists. They catch explicit military and negotiation vocabulary and miss irony, implication and hypotheticals.
- Coverage is not events. A rise in articles is a reason to look, not a finding about what happened.

Generated by osint-news-monitor 1.0.0 from public RSS feeds and the GDELT index. Rule-based: the same data always gives the same text, and every sentence traces to a count.
